Journal of research

Vol. 10 no. 19

Issn: 1909 – 3667

Issn online: 2422-3670

Director

MSc. Emeterio Cruz Salazar
Universidad ECCI, Colombia.

Editor in chief

Dr. Ing. Carlos Andrés Forero Núñez
Universidad ECCI, Colombia

Editorial board and scientific committee

Dr. Ing. Pedro Prieto Pulido, Universidad del Valle, Cali, Colombia

Dr. Ing. Leonardo Juan Ramírez López
Universidad Militar Nueva Granada, Bogotá, Colombia

Dr. Ing. Joachim Jochum, University of Applied Sciences Hochschule Offenburg, Offenburg, Germany

Dr. Ing. Nalladurai Kaliyan, University of Minnesota, Minnesota, Usa

Dr(c) Ing. MSc. Santiago Ramírez Rubio
Cranfield University, United Kingdom

Dr. Ing. Enrique Estelles Arolas
Crowdsourcing, Colombia

Dr. Ing. Andres Julian Ariztizabal Cardon
Universidad Jorge Tadeo Lozano, Colombia

Dr. Ing. Luis Javier Martínez Guerrero,
Universidad ECCI, Colombia.

Editorial team

Ing. Luz Adriana Suárez Suárez
Universidad ECCI, Bogotá, Colombia

Ing. Laura Carolina Hernández Solórzano
Universidad ECCI, Bogotá, Colombia

EDITORIAL

Color prediction in ceramic enamels using the Kubelka Munk model

Edgar A. Chavarriaga M., Nelson A. Correa R., Juan F. Montoya C., Oscar J. Restrepo B.

1

Compressive Sensing Hardware in 1-D signals

Sergio S. Pinto, Luis E. Mendoza, Hernando J. Velandia, Valetín Molina, Leonor J. Cevalon.

5

Phoneme Recognition System Using Articulatory-Type Information

Alberto Patiño S., Franklin A Sepúlveda, Diego F. Gómez C.

11

Swimming pool heating systems: a review of applied models

Silvio A. Jiménez, Victor Carrillo, Manuel A. Alvarado B.

17

Determination of the probability and rate of corrosion on reinforced concrete specimens through a remote corrosion monitoring system

Freddy Bernal C, Guillermo Roa R., Carlos Cabrera C., Nicolás Sierra M, William Aperador

27

Images compression process in the radiological service unit as an infrastructure component in the Colombian health model

Lilia E. Aparicio P., Julián L. Cárdena, Alexandra López S.

33

Acoustic Tracking System for Autonomous Robots Based on TDE and Signal Intensity

Edgar D. Lasso L., Alejandra Patarroyo S, Fredy H. Martínez S.

43

Comparison and validation of turbulence models in the numerical study of heat exchangers

Juan G Ardila M, Diego A. Hincapié Z, Julio A. Casas M..

49

Incidence of using chicken fat based biodiesel on the performance of a 13.5 kW compression ignition piston engine for power generation

Juan G. Ardila; Fabio E. Sierra V, Manuel A. Montenegro, Favio O Narváez A.

61

Hand recognition using depth cameras

Alexander Cardona

73

Directors

Superior Council President
Lic. Luz López De Soler

Rector
MSc. Fernando Arturo Soler López

Academic Vice - Rector
MSc. Guillermo Jerez López

Research Vice - Rector
MSc. Emeterio Cruz Salazar

Administrative Vice-Rector
MSc. Federico Hernández Cubillos

Quality Vice - Rector
Dr. Mireya Ardila Rodríguez

E-learning Vice - Rector
MSc. William Michel Velez Candia

General Secretary
Ing. Luisa María Hincapié Rozo

Postgraduate Direction
Adm. Segundo A. Martínez Aguilera

Deans

Engineering
MSc. Carlos Mauricio Veloza Villamil

Economics and Administrative
Harnoldo E. Puerta Cabarcas

Arts
Dra. Esperanza López De Bolívar

Basic Sciences
MSc. Alejandro Leuro

Coordination

Industrial Engineering Coordination
Ing. Julio Aníbal Moreno

Mechanical Engineering Coordination
Ing. MBA Carlos A. Cristancho Rivera

Electronic Engineering Coordination
Msc. Luis Fernando Rico

Systems Engineering Coordination
MSc. Monica Barrios Robayo

Biomedical Engineering Coordination
Ing. Herman Dávila Torres

Environmental Engineering Coordination
MSc. Alejandro E. Moreno Andrade

Plastics Engineering Coordination
Ing. Hernán Enrique Castillo Lozano

Management Accounting Coordination
MSc. Fernanda Galvez Sabogal

**Foreign Trade and International Business
Coordination**
Lic. Haroldo Enrique Puerta Cabarcas

Marketing and Advertising Coordination
MSc. Jaime Ortiz Vanegas

Fashion Design Coordination
Dis. Janeth Vera Hernández

Modern Languages Coordination
Lic. Luis Orlando Gutiérrez Sosa

Nursing Coordination
MSc. Ruth Janneth Zamora

Articulation Coordination
Ph.D. William Ariza

Language Center
Lic. Tito Solano Rua

Corporate Welfare
Psic. Claudia Castelblanco Rodríguez

Editorial

The vehicle of communication between the academy and society is the scientific publication. Indeed, it is here that the results that emerge from the research projects are revealed and disseminated.

According to Colciencias, the body that regulates research in Colombia, 31% of official research groups in the country focus on human sciences while 17% focus on engineering. Meanwhile the 18% of books and scientific papers published in the country correspond to scientific production. Despite the efforts of various institutions, both public and private, the creation of new knowledge and innovative processes is still low in comparison with other countries.

One of the most important aspects we need to work on is educating our youth in science, technology, innovation and writing. In doing so, we can strengthen the creation and communication of research and thus allow the country to position itself as an innovative developing country.

With the aim of becoming a worldwide reference in the areas of engineering and natural sciences, the ECCI University, through its scientific journal TECCIENCIA, introduces the following studies. Here, some valuable manuscripts were chosen for their scientific quality through a peer review process.

From Medellin, the National University of Colombia, the Metropolitan Institute of Technology (ITM) and Lasallista University Corporation presented the paper "Color prediction in ceramic enamels using the Kubelka Munk Model".

The University of Pamplona and ECCI University carried out a study called "Compressive Sensing hardware in 1D signals", where signal compression is employed in order to use the least amount of data in communications systems by recording of EMG electromagnetic voice signals and ECG electrocardiography.

The Industrial University of Santander and Bogotá's Antonio Nariño University present a study entitled "Phoneme Recognition System Using Articulatory-Type Information," which uses the MOCHA-TIMIT database. They evaluated the system performance using voice recognition, demonstrating that the recognition of phonemes based on hidden Markov chains can be improved.

Sincerely:

M.Sc. Fernando Arturo Soler López
Rector

Nueva Granada Military University presents a paper called "Determination of the probability and rate of corrosion on reinforced concrete specimens through a remote corrosion monitoring system," in which they developed equipment for monitoring the state of corrosion of concrete infrastructures using an electrochemical test based on the ASTM C879-9 standard.

The District University of Bogotá presented the manuscript entitled "Images compression process in the radiological service unit as an infrastructure component in the Colombian health model." Here, they reviewed different techniques of image compression in the area of radiology. The study included the different imaging modalities, which were then introduced into the system of compression achieving results through Matlab simulations.

The District University also presented "Acoustic Tracking System for Autonomous Robots based on TDE and Intensity," in which an autonomous acoustic system for robots was developed based on TDE and signal strength. For voice identification module, VR Easy module by Tigel KG was used. This was programmed with a series of commands in Spanish and also recognized by a module for further analysis.

The Metropolitan Institute of Technology in Medellin introduced us to their study "Comparison and validation of turbulence models on numerical study of heat exchangers." In this paper, numerical heat exchange models, developed with ANSYS commercial package, were validated and compared with experimental results and mathematical modeling studies.

Likewise, La Salle University, the Autonomous University of Colombia (FUAC) and the Los Libertadores University Foundation presented their paper "Swimming Pool heating systems: A review of applied models," a noteworthy review of swimming pool heating systems.

These are some of the studies you can find in this issue. We would like to acknowledge your participation as a reader of this journal; meanwhile, we hope to know more about your further research soon.
